Blog: wholelottarob.com;
Email: iguy@iguy.org
Twitter: [robschertzer](#)

Dr Schertzer is a glaucoma subspecialized Ophthalmologist, Electronic Medical Record evangelist and technology geek. He currently cares for patients as a permanent locum for 3 practices in the Vancouver area: North Shore Eye Associates, Dr Krista Scott off Commercial Drive, and Dr Noa Mallek in Kerrisdale. In October 2018 he was appointed to the Board of Directors of the [Health Data Coalition of BC](#) and re-appointed as Clinical Associate Professor of Ophthalmology and Visual Sciences at University of British Columbia. When not at work, Dr Schertzer hosts a podcast of indeterminate frequency and duration called [Talking About Glaucoma](#), plays rock, folk, country, jazz and blues guitar and can be spotted around town in pop-up choirs.

Prior to his return to Vancouver in 2018, Dr Schertzer was on the clinical faculty at Dartmouth-Hitchcock Medical Centre in New Hampshire for 5 years. At Dartmouth, he trained at “The Dartmouth Institute” for Health Policy & Clinical Practice as a Clinical Microsystems coach, to lead teams to optimize workflow for patient care. In late 2015 he began coursework at Epic University in Verona, WI, toward becoming an Epic Physician Builder. He is the founder of the West Coast Glaucoma Centre, in Vancouver, BC and was on faculty in the Department of Ophthalmology & Visual Sciences at the University of British Columbia from 1999 - 2013 as Associate Clinical Professor in the Division of Glaucoma.

Much of Dr. Schertzer’s non-clinical time is spent using technology for education. He blogs about glaucoma, electronic medical records and technology, hosts a podcast series called [Talking About Glaucoma](#), created a [sub-reddit](#) for discussing the latest glaucoma literature, and is the co-founder of the [Glaucoma Patient Group](#) Facebook page. He has been a longstanding member of the [Maintenance of Certification Committee](#) of the Canadian Ophthalmological Society.

Education: BSc in Physiology from McGill University (1983), MD (1988) and internship from Dalhousie University (1989), Ophthalmology residency at McGill (1994), glaucoma fellowship under David Campbell’s guidance at Dartmouth (1995), and an MEd in Adult Education at the University of British Columbia (2006).

From 1995-1999, Dr. Schertzer was director of the glaucoma service at the University of Michigan Kellogg Eye Center. His Multimedia Oculosurgical Modules (MOM) series became the top selling CD title for Mosby at the time. He gained a great deal of clinical experience with handling the complications of prior glaucoma surgery from patients who had high dose mitomycin trabeculectomies performed in the past. Dr. Schertzer published two papers on his experience with the Ahmed Glaucoma Valve. One on the success rate of surgical revisions of the S2 implant and, more recently, the largest study by a single surgeon looking at the 2-year success rate of the FP7 implant compared to the S2 implant. He has also co-authored book chapters on pigmentary glaucoma, ghost cell glaucoma, and surgical goniosynechialysis.

In 1999, Dr Schertzer (and his young family) moved to Vancouver in pursuit of the great outdoors, a full-time position at the UBC Eye Care Centre and an MEd at UBC. In 2005, he founded the West Coast Glaucoma Centre where he and his healthcare team had 5 lanes, 3 visual field machines, an HRT, SLT, YAG and Argon lasers, and a fully integrated electronic medical record. He managed to get a heart attack two months later, his MEd soon afterwards, and a publication looking at whether there are enough glaucoma specialists in Canada to meet the needs of the aging population. Dr. Schertzer also looked at the needs of community ophthalmologists to provide recommendations for changes to the ophthalmology curriculum at UBC, which have since been implemented.

Dr. Schertzer enjoys leading talks with eye care professionals at grand rounds and small group gatherings in the U.S. and Canada. Most of these center around clinical aspects of glaucoma care, particularly related to surgical care, ethical issues, and nerve head imaging. Dr. Schertzer has also lectured at national and international glaucoma meetings on the implementation of electronic record systems. He has developed fully accredited speakers' programs for Merck and Pfizer in conjunction with the Canadian Ophthalmological Society as well as a fully accredited program for Allergan Canada in 2012.

Disclosure: Robert Schertzer, MD, MEd, FRSCSC, DABO has disclosed that he has no significant relationships with any commercial supporters.
